Art Unit: 2853

DETAILED ACTION

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CAR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-18 drawn to a method of controlling a print operation of an ink jet printer, classified in class 347, subclass 23.

II. Claims 19-29 drawn to a method of cooling a print head of an ink jet printer before capping, classified in class 347, subclass 18.

III. Claims 30-58 drawn to an apparatus for controlling a print operation of an ink jet printer, classified in class 347, subclass 5.

IV. Claims 59-93 drawn to a computer-executable process steps stored on a computer-readable medium, the computer executable process steps to control a print operation of an ink jet printer, classified in class 347, subclass 14

3. The invention are distinct, each from the other because of the following reasons: Invention I is related as a method of controlling a print operation of an ink jet printer an ink-jet printing.

Art Unit: 2853

Invention II is related as a method of cooling a print head of an ink jet printer before capping.

Invention III is related as an apparatus for controlling a print operation of an ink jet printer.

Invention VI is related to a computer-executable process steps stored on a computer-readable medium, the computer executable process steps to control a print operation of an ink jet printer

The inventions are distinct if either or both of the following can be shown: (1) that to a method of controlling a print operation of an ink jet printer or (2) that to a method of cooling a print head of an ink jet printer before capping or (3) to an apparatus for controlling a print operation of an ink jet printer or (4) a computer-executable process steps stored on a computer-readable medium, the computer executable process steps to control a print operation of an ink jet printer .

4. Because these inventions are distinct for the reasons given above and have acquired a separated status in the art as shown by the different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Mr. Mark J. Itri on October 20, 1999 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicants' are advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement be traversed (37 CAR 1.143).
